

Evaluation

Personally, I like the palette of the website, not using pure black and pure white with green in it makes the website look clean and cool. A lot of things changed from my prototype, such as the menu and gallery, I am not sure if it is even possible to do only on HTML and CSS, but most of the tutorials I found used JavaScript, so I had to change the design of the pages. However, just as the others said, it is lacking a lot of things, such as the description.

For the home page, I think it would be better if I put the sections in a viewport height, so you could only see this piece of information when you scroll to this page. As Figure 1 shows, the word Demo and the description do not fit in a viewport height, maybe this could be changed. For the about me section shown in Figure 2, someone told me that I could use images instead of words to show the skills. The reason I did not do that is because I could not find the same size image for each icon, and for some reason the codes were not working so I just went with the basics. I received feedback saying the picture is a bit small, for me it seems fine, but it might be because the browser or desktop size is different.

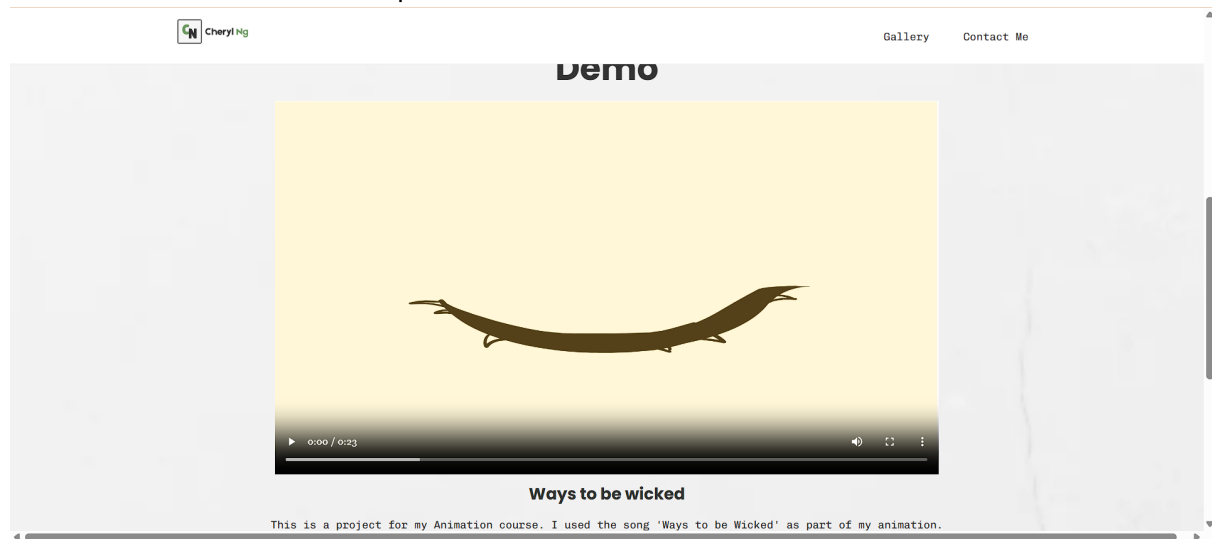

Figure 1 - Home page (Demo)

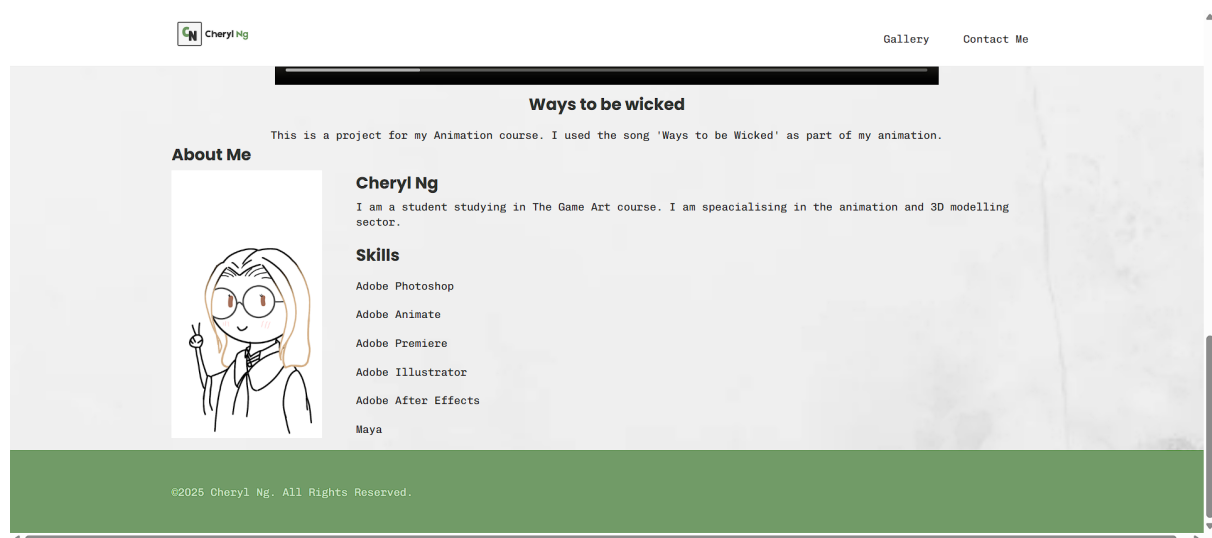

Figure 2 - Home page (About Me)

For the Gallery shown in Figure 3, I received a lot of feedback saying I did not have description, and yes, I forgot about that part. I did not include any descriptions but the titles, one of the reasons is I do not actually have a description about my project.

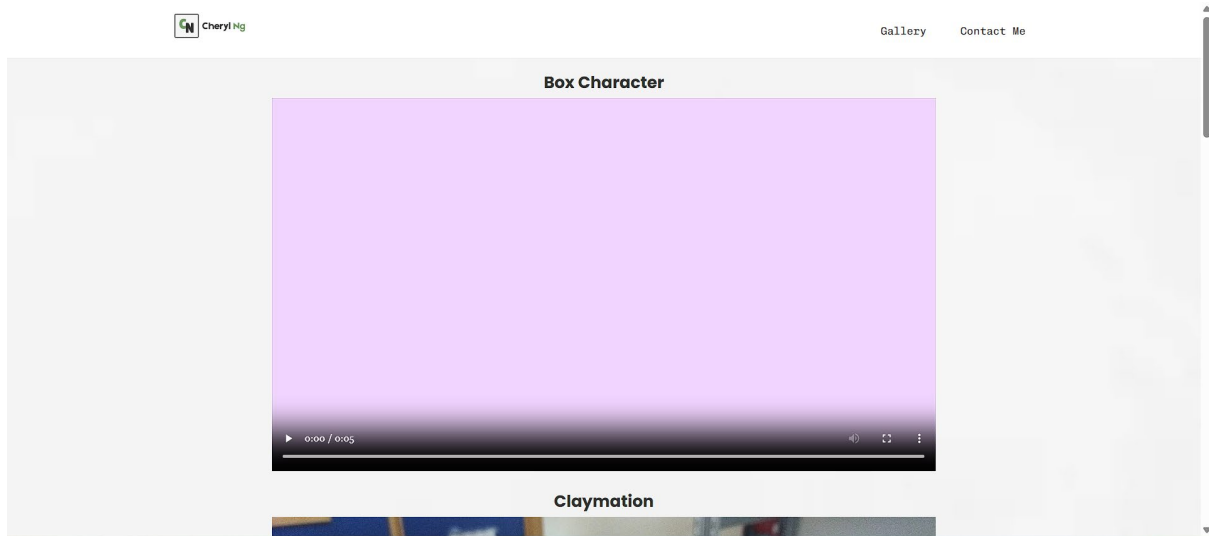

Figure 3 – Gallery

Most of the people like the color scheme, including me, some people like that it is basic and easy to navigate, some people says that there are too less things to do on the website. Some people like the overall design of the website, excluding the content, just only a few issues to change.
